TAS: the thermal equipment trip shuts off pipe-lines safely up to 650°C.

AKT..TAS: the space-saving combination of a manual valve and a thermally tripping shut-off valve offers two functions in a single housing.

1 Application

Thermal equipment trips can be used in industrial and commercial installations, upstream of gas inlet systems, at gas cooker points, instantaneous water heaters and gas boilers. In the event of fire, they isolate the gas pipeline and provide long-term protection against the uncontrolled escape of gas and a potential explosion. Valves AKT..TAS and TAS can be used pursuant to the German Firing System Directive and TRGI (DVGW Code of Practice G 600).

TAS

Automatically closing safety device

AKT..TAS

Manual valve for manual shut-off, for gas, with automatically closing safety device

*Thermal equipment trip TAS
15 – 25..M for biologically produced methane*

Manual valve with thermal equipment trip AKT..TAS, internal thread

*Thermal equipment trip TAS
32 – 50IA, internal and external threads*

Manual valve with thermal equipment trip AKT 25 – 150F50TAS, flanged connection

*Thermal equipment trip TAS
32 – 200FF, flanged connection*

Gas pressure control (and measurement) system with TAS

Kitchen safety equipment with AKT..R10TAS/AKT..R40TAS

Main gas shut-off device with AKT..F50TAS

2 Examples of application

When a thermal equipment trip TAS or a manual valve with thermal equipment trip AKT..TAS (pursuant to TRGI) is installed, the gas safety system features enhanced fire protection.

If the ambient temperature increases to more than 95°C in the gas pressure control (and measurement) system, the thermal equipment trip TAS trips and shuts off the gas supply safely.

In the application kitchen safety equipment with AKT..R10TAS/AKT..R40TAS and main gas shut-off device with AKT..F50TAS, the gas supply can be shut off manually at the inlet, in addition to the thermally tripping shut-off.

Reference standards

TRGI paragraph 5.1, "... fittings ... and measuring devices must be tight and designed in such a way that they do not lead to a risk of explosion in the event of exposure to an external fire."

3 Certification

EC type-tested and certified pursuant to:

pursuant to

- Gas Appliances Directive (2009/142/EC)

AKT..R10TAS and AKT..R40TAS

- Manually operated ball valves and closed bottom taper plug valves for gas installations in buildings (DIN EN 331)
- Thermally activated shutting-off devices for gas – Requirements and testing (DIN 3586)

AKT..R10TAS

- DVGW test mark NG-4341BR0234
- Gas Appliances Directive CE-0085BR0233

AKT..R50TAS

- BVGW test mark NG 4341BU0538
- Gas Appliances Directive CE-0085BU0539

AKT..F50TAS

- DVGW test mark NG-4341AT2766
- Gas Appliances Directive CE-0085AU2378

4 Function

If the ambient temperature increases to more than 95°C in the event of a fire, a seal melts in the thermal equipment trip TAS and releases a spring that is held by a retaining pin. The spring presses the closing taper against the sealing seat ensuring that no more gas can pass through.

The valve can withstand temperatures of up to 650°C, which means that it remains tight for at least one hour.

5 Flow rate

6 Selection

6.1 Selection table for TAS

Typ	15	20	25	32	40	50	65	80	100	125	150	200	I	F*	I	A	F	50	M

Order example
AKT 50R50TAS

Type code for AKT..TAS

Code	Description
AKT	Manual valve
15 ... 150	Nominal size
R F	Rp internal thread to ISO 7-1 PN 16 flanged connection to ISO 7005
10 50**	Max. inlet pressure $p_{u\ max.}$ / Max. operating pressure (GT*) with thermal capacity up to 650°C: 5 bar/1 bar (GT) 5 bar/5 bar (GT)**
TAS	Integrated thermal equipment trip

* Gas temperature resistance = GT
** If the TAS installation set (available on request) is being used, the manual valve with thermal equipment trip
AKT..F..TAS meets the high thermal capacity requirements for inlet pressures of up to a max. of 16 bar.

2 Project planning information

2.1 Installation

Installation position: any.

Wall clearance minimum 20 mm, note manual valve rotational radius.

AKT..TAS or TAS are to be installed immediately upstream of equipment that must not be exposed to thermal stresses or equipment that is not resistant to high temperatures.

Paint coatings, insulation, protective covers, etc. are not permitted.

Use high temperature resistant flange seals on the inlet side, see accessories.

3 Accessories

Flange seals for AKT..TAS

Use high temperature resistant flange seals on the inlet side, e.g. type WL-HT:

rubber seal made of NBR 50219.0, support ring made of ST 37, galvanized and chromized, coated with graphite on both sides and with red high temperature resistance label (HTB), seal material DVGW tested and registered.

4 Technical data

Types of gas:

natural gas, town gas and LPG (gaseous). Fuel gases in accordance with DVGW Code of Practice G 260.

Thermally controlled tripping at: 95°C, +/-5°C.

Closing time: 60 s.

Duration of seal (HTR): minimum 60 minutes at 650°C.

Leakage: 30 l/h (at a test air pressure of 4 bar).

Ambient temperature: -20 to +60°C.

Thermal equipment trip TAS

In acc. with DIN 3586.

Inlet connection:

Rp internal thread to ISO 7-1,

PN 16 flanged connection to ISO 7005.

Outlet connection:

Rp internal thread and R external thread to ISO 7-1, PN

16 flanged connection to ISO 7005.

Housing: steel, galvanized.

TAS..M

For fuel gases in accordance with DVGW Code of Practice G 262.

Housing: steel, chemically nickel-plated.

Closing taper and closing spring: corrosion-resistant steel.

Threaded manual valve with thermal equipment trip AKT..R..TAS

MOP 5 (maximum over pressure) to EN 331.

Typ	Max. inlet pressure _{gu max.} [bar]	Max. operating pressure GT* with thermal capacity up to 650°C [bar]
AKT 15R10TAS, AKT 20R10TAS, AKT 25R10TAS	5	GT1
AKT 32R50TAS, AKT 40R50TAS, AKT 50R50TAS	5	GT5

* Gas temperature resistance = GT

Rp internal thread to ISO 7-1.

AKT..R10TAS

Housing: brass, nickel-plated,

Ball: brass, chromium-plated,

Seal: PTFE (Teflon),

Spindle seal: Viton.

AKT..R50TAS

Manual valve housing: brass, chromium-plated,

TAS housing: steel, galvanized,

Ball: brass, chromium-plated,

Seal: PTFE (Teflon),

Spindle seal: Viton.

Flanged manual valve with thermal equipment trip

AKT..F. TAS

PN 16 flanged connection to ISO 7005

Typ	Max. inlet pressure $p_{u\ max.}$ [bar]	Max. operating pressure GT* with thermal capacity up to 650°C [bar]
AKT..50TAS	5	GT5

* Gas temperature resistance = GT

When using high temperature resistant screws (up to 650°C pursuant to DIN 267, Part 13), the max. inlet pressure $p_{u\ max.}$ and the max. operating pressure GT increase to 16 bar.

Housing: GGG 40,

Ball: Ms58, chromium-plated,

Seal: PTFE (Teflon),

Spindle seal: Viton.

Overall length L pursuant to EN 558-1, line 1.

5 Maintenance cycles

TAS and AKT..TAS require little servicing. After tripping, the valves have to be replaced.

Feedback

Finally, we are offering you the opportunity to assess this “Technical Information (TI)” and to give us your opinion, so that we can improve our documents further and suit them to your needs.

Clarity

- Found information quickly
